

Dixie

Jan. 1945

Responsible, stable individual of adequate intelligence by "W" standards. He is highly motivated and will adjust well to a large variety of work conditions. He has preference for work involving initiative, endurance, courage, and social contact. His is a repressed, "constricted" personality, cautious, overly controlled, and on the whole, fatalistic and somewhat emotionally impoverished, although he is socially active and functions well. He reveals somewhat the picture of an individual who has suffered from lack of maternal sustenance, consistent with the fact that his mother died in his infancy.

His emotional tensions are revealed chiefly in his restlessness, nail-biting, foot-tapping, and the like.

Intellectually adequate by "W" standards, his thinking is of the concrete, practical type. He is not adapted to work requiring highly abstract thinking.

Recommended.

Interview

Catholic Male Single Age: 32 yrs. Previous occupation: F.B.I.

Father: Episcopalian. Father died when he was 17 years old. Attached.

Mother: Catholic. His mother died when he age 3 years.

Other persons: An uncle -- for advice. Aunt was foster-mother.

Away from home 5 years.

Sibling: B+5, S+7. Temperamental. More difficulty with brother. Financial disagreements. Usual battles.

College: Good. Editor of two year books.

Public: Speaking: Much experience.

Fainting: O. Almost fainting feeling in church once a year.

Self always religious.

Boxing: He was knocked out in training once or twice. Not to the count 10.

He had a lot of knock-outs to his credit.

Headache: To any undue strain on his eyes. Mild headaches. Last several hours.

Relieved by aspirin. No family history.

Denies nervous breakdown. Thinks of self as average amount of tension, but overly nervous or excitable.

Shy as a youngster. Makes easy contacts. Regarding friends: Has definite liking for certain people, etc. Takes solitude pretty well.

McDonough prep school. Very happy. Usual period of lonesomeness. Over it in a month. Sent to prep school at age 12 years. Not lonely.

Medical: Severe illness: O. Tonsillectomy at 14 years.

(Doubts about self): When you have to make a decision.

Denies recurring ideas.

Has always felt adequate to make a living.

F.B.I. by accident. A friend was going to apply. He went with him. Also applied. Worked as agent. (?) Each case a real challenge.

Interview cont'd.

Of all his cases-- picks out one chiefly because the penalty for murder was so mild.

F.B.I. influence has made him more lenient to people. A broader understanding of people. To him there's little difference between criminal and others in appearance, etc. Circumstances explains a lot etc.

Took a course in short stories. Got "A's". Mostly about people. Mostly people in bad position in which end is usually tragic.

Sleep: plus.

Usually nervous. Taps feet a lot.

Always interested in anatomy.

Sex: plus. A girl friend.

Not overly conscientious. Just does the best he could.

Regards home as happy. Raised well, etc.

1 minute Romberg test.

A bit stiff. Left fingers flexion. Right slow flexion.

Movements Blots

1. Dancing
2. Shaking hands
3. Pulling against each other
4. Drinking
5. Prim figures
6. Intercourse. They're too far away.
7. Ballerina. Sliding backwards.
8. Shakes head. Two divers.
9. Kissing.

Rorschach Test

- I. 1. vertebrae (W) yes, Smithsonian Institute (anat.)
- II. 1. ore (C) odd shapes. I thought of first thing when I first saw it; bug.
2.
2. cross section of earthworms
- III. 1. unfinished drawing of 2 animals or 2 persons (F+)
- IV. 1. That looks like some prehistoric weapon--stone armor--something like that. (Prehistoric)
- V. 1. some animal--butterfly?. But maybe ? (p)
- VI. 1. You'll laugh at this. Like a fish when you cut it open (whole card?) Maybe a rim around them (shape and water though a fish is lighter in water) (Anat)
2. antennae. Maybe of weasel. (DaD)
3. rest is pelt (p)
- VII. 1. I'd say that's an unfinished drawing of 2 people, 2 dogs, maybe 2 rabbits (WF+)
- VIII. 1. cross section of a body--not a man, body of some animal (Anat.) (All taken from that backbone part.)
- IX. 1. That again looks like cross section of a body. Slides here seen in school on a microscope. (red reminded you of what?) Intestines. Green of lungs. Skin backbone. (all F)
- X. 1. A collection from the laboratory (WF+A)
animal segment (anat.)
backbone (top grey) here (also reds.)
crab (lat. blue) (p)
fauna from sea--marine growth of some kind. (other details) (WFC)
(later adds seen from low green.)
(Says blue color had influence on his thinking of marine, also green.)

Marquette

12-12-44

A 21 year old male, of fair intelligence, who reveals evidence of psychoneurosis. As a child, he stuttered to age 12, had night terrors, walked and talked in his sleep. He suffers frequently from headaches, insomnia and fatigue. During our tests he showed numerous neurotic symptoms, revealed physically in unsteadiness, flushing, rapid pulse, etc. He has brief periods of depression with phantasies of violent forms of suicide, though no actual impulses. He has good insight, recognizes his feeling of anxiety and his "emotional immaturity." There is evidence of increasing stabilization especially favored by his intelligent wife.

Definitely not recommended.

Movement Blots

1. Dancing
2. Greeting---oriental
3. Shaking hands
4. Siamese twins trying to get away from each other
5. Boy and girl in early throes of puppy love
6. Somebody fell on the ice
7. Climbing a cliff
8. Diving
9. Two skeletons in the desert strewn about.

Interview

Catholic Married Age 21yrs. Born in U.S.A. 4 yrs. college, 1 yr. dentistry

Father: Quiet, reserved, kindly, industrious

Mother: Died when he was 5 years old. "I never knew her".

Aunt: "A very amiable sort of person."

He was raised by a maternal aunt.

Sibling relationship: Satisfactory from brother and sister. "Companionship"

Family friction: Between aunt and father.

Preference: For father.

Wife: Aggressive, vivacious, quick

Stuttering to age of 12 years. Night terrors to age of 10 years. Sleep walking and talking.

Headache: Once a month. Insomnia and fatigue.

Mission: Medical assistant.

Previous examination: Fitness for job 1. Recommended for reassessment.

Education: Best subject: Worst (?) subject: Mathematics and Chemistry

Repeated first year dentistry because incomplete first year. Taken out of second year dentistry when under army because didn't take it seriously.

Hobbies: Piano

Books: Tale of Two Cities, etc.

Magazines: Time Newsweek, Saturday Evening Post

Periods of depression. Several days duration and every few months or so, with ideas of suicide by violence, and very partial impulses withheld by religion.

Period 18-20 years in company of boy: woman hating period, fear of women.

Happiness period. Marriage. Had love affair and girl realized he'd never propose. She said marriage or else. And so it happened.

Interview cont'd.

Effeminate mannerisms.

Always feel tense, anxious. Relaxed only with wife!

Feeling of trying to get things out of life of which he was gypped.

Childhood of repressed aggression against aunt who played role of step-mother. He and father victims of her "undercurrent" domination.

Has good insight. Regards self as emotionally immature.

Evidently increasing stabilization going on.

Marked instability.

1 minute Romberg test.

Flushing, many eye movements, swallowing. In last 5 seconds head tremor.

Rors. Test

Time: 33 minutes
